Jesse Waite

jessewaite86@gmail.com | github.com/niceyeti | 425-877-5936

I am a software engineer with production experience in MLOps, DevSecOps, CNCF technology, and secure service deployment across languages and sensitive environments. I am seeking roles in agentic ops engineering.

Lead Software Engineer *Schweitzer Engineering Laboratories, Government Services* *2025-2026*

- Led secure MLOps framework project for on-prem model life-cycle management using Dagster and MLFlow
- Built dynamic modal analyses (DMD) pipeline for simulating high-dimensional power system fault contingencies
- Built horizontally-scalable PSSE automation services, enabling high-dimensional search solutions

Software Engineer *PNNL National Security Division, Special Projects* *2022-2025*

- Built and deployed Saga pattern in KStreams atop Kafka and AWS CDK for critical intelligence project
- Developed mission-critical RKE2 deployment, increasing team velocity, utilizing Keycloak, Vault, and Harbor
- Developed and deployed C# and Python api and Elasticsearch stack to AWS government segments
- Implemented and deployed DynamoDB gRPC analytics service using domain-driven design principles
- Successfully refactored AWS CDK cloud stacks to decouple analytics and infrastructure team deployments

Software Engineer *Schweitzer Engineering Laboratories, Synchrowave Operations* *2018-2022*

- Delivered production analytics applications and microservices for Synchrowave Operations
- Planned and executed live training demonstrations for sales presentations and customer on-boarding
- Built Parquet parsers and MLOps tooling for DOE-sponsored power system data research

Critical Infrastructure Security Developer *Washington State University* *2017-2018*

- Derived and published Markovian attack observability models based on MITRE ATT&CK
- Delivered ELK-stack analytics solution, salvaging project funding

Associate Software Engineer *Schweitzer Engineering Laboratories, R&D* *2015*

- Built CI system in Python, IEC61131-ST, and C# to synchronize firmware and software development
- Implemented C# command line interface into AcSELerator RTAC, securing a federal contract as a required feature

Software Engineering Intern *Schweitzer Engineering Laboratories, R&D* *2012-2014*

- Publicly released 311C-x 103 protective relay settings configuration driver and tested other public releases
- Developed driver code reversal tool to automate large sets of manual tests

Education

M.S. Computer Science 2018 *Summa Cum Laude* *Washington State University* *3.94 GPA*

- Thesis in process modeling and anomaly detection using graph compression
- Primary coursework in machine learning, structured prediction, reinforcement learning, and network science
- SME and developer of large-scale language analyses for intelligence applications using Gensim and Pytorch

B.S. Computer Science 2014 *Summa Cum Laude* *Washington State University* *4.0 GPA*

- Recipient of merit scholarships and NSF research grant for language prediction on AAC devices
- Independent projects with SOLR, FreeRTOS, robotic control, wireless network programming, and MCU protocol drivers for I2C, SPI, and serial/UART

Projects and Service

- Volunteer youth code tutor and mentor
- Developing secure agentic control plane workflows in LangGraph
- Developer of CNCF workflow execution language in Golang
- Author of Channerics golang channels library
- Developer of SLIDE fast language-inference methods for eye-tracking AAC devices
- Implemented open source Covid-19 semantic search vector database using gensim for Allen-Ai Kaggle dataset
- CHEETAH author, a neural language analyzer identifying cyber malinformation APTs
- ABLE and Sentinel creator, large-scale historical/social web content extraction pipeline
