

Jesse Waite

jessewaite86@gmail.com github.com/niceyeti 425-877-5936

Software engineer with comprehensive production experience in MLOps, DevSecOps, and intelligence.

EXPERIENCE

Lead Software Engineer *Schweitzer Engineering (SEL), Govt. Services*

- Implemented secure MLOps framework for on-prem operational workflows
- Built power system simulation and analytics framework for dynamic modal analyses

DevSecOps Software Engineer *PNNL National Security Division, Special Projects*

- Developed mission-critical RKE2 deployment, increasing team velocity
- Built and deployed multiple CDK stacks and build infrastructure to secure AWS segments

Software Engineer *Schweitzer Engineering, Synchrowave Operations*

- Delivered microservices for the Synchrowave Operations synchrophasor data platform
- Built parsers and data engineering tooling for DOE sponsored power system data research

Power System Security Researcher *Washington State University*

- Published attack observability models based on MITRE ATT&CK
- Delivered ELK analytics solution, salvaging project funding

Associate Software Engineer *Schweitzer Engineering, R&D*

- Built CI system in Python, IEC61131-ST, and C#, automating hybrid firmware/software development
- Implemented C# command line interface into AcSEerator RTAC

Software Engineering Intern *Schweitzer Engineering, R&D*

- Publicly released 311C-x 103 protective relay settings configuration driver
- Developed driver code reversal tool to automate large sets of manual tests

EDUCATION

M.S. Computer Science *Summa Cum Laude Washington State University* 2018

- Thesis in process modeling and anomaly detection using graph compression and Bayesian modeling
- Emphasis in machine learning, structured prediction, reinforcement learning, network science
- SME and developer of large-scale language analyses engine for intelligence applications

B.S. Computer Science *Summa Cum Laude Washington State University* 2014

- Recipient of merit scholarships and NSF research grant for language prediction on AAC devices
- Emphasis in computer engineering and artificial intelligence
- Independent projects with SOLR, FreeRTOS, robotic control, wireless network programming, and MCU protocol driver implementations (I2C, SPI, and serial/UART)

PROJECTS AND SERVICE

- Volunteer youth code tutor and mentor
- Developer of Devster, a Golang workflow execution language for CNCF containers
- Author of Channerics generic channel library for Golang 1.18+
- Developer of SLIDE fast language-inference library for AAC eye-tracking devices
